Looking Ahead to DC2

S. W. Digel
Stanford Linear Accelerator Center

From Checkout 3 to DC2

- **At the DC2 Software Workshop in June, we discussed what new functionality we can anticipate developing in the ~3 months between Checkout 3 and DC2**
 - **Not much**
- **In addition to working out issues that arise in Checkout 3, we would like to implement the**
 - **Event display server**
 - **meaning event display + data server**
 - **DC2-era instrument response functions**
 - **event classes, etc., ideally informed by studies with high-level analyses**
 - **Also regarding the response functions, CALDB representations and a visualization utility are desirable**

Access

- <http://glast-ground.slac.stanford.edu/workbook/>
- The User Workbook* has been under development across the SAS software effort for the past year by Chuck Patterson
 - His considerable expertise, capacity for clear thinking, and patience have been applied to incorporating documentation (in various forms) from the science tools developers
- You will notice that the documentation is linked via ‘tool bars’, which stay fixed on the pages and always make clear where you are
- You will also notice that the organization of the documentation is (largely) uniform
- For Checkout 3, more contributions – user guides and tutorials – are expected to be ready
